

# CASE STUDY

## The Prepared Tradesman

### Why I need a dual battery system

My ute is my workshop. Many of my jobs have no power on site. No power means that I can't use my big tools or charge my portable packs. No power means no work and no work means no money. I need to have power packs always on charge and need to be able to run an extension cord to get my impact drills onto the heavy work. I need portable power that will last the whole day.

My old battery ran out before morning smoko. I can't be lugging hundreds of kilograms of lead around. My portable battery powered tools are fantastic but I need to run my 240V power tools as well. If I can work this out it means I can quote on any job and know I can deliver.

### Why I want the **LBS Dual Battery 200Ah with PMU**

- The battery weighs a third of the equivalent AGM
- It has the DC-DC charger built in so no extra box
- I can use a solar panel and charge up during the day
- I can charge it up every night at home
- The battery can delivery 100A continuous and 500A peak
- It is designed for exactly what I do
- Will last for thousands of days of work
- The PMU gives me 240AC power that can power my tools

This is what we call **POWERING FREEDOM™**
