

CASE STUDY

The Weekend Adventurer

Why I need portable power

I need lights when the sun goes down and to enjoy a cold beer or two when I am making dinner for the family. I need cold milk in the morning for coffee and cornflakes. I need to charge up phones and tablets, run a small TV in case the football game can't be missed and I need to keep the music playing when I am scaling the fish. I need portable power.

My current lead battery weighs so much I nearly threw my back out trying to carry it. Cables and connectors were always getting lost and I accidentally ran the battery down to empty one time and it was never the same again. It was ruined after a couple of trips and it's now the world's most expensive boat anchor.

Why I want the **LBS Freedom Power Pack (FPP)**

- It weighs less than 10kg;
- It will last for thousands of trips;
- It has all the sockets I need to plug everything into;
- It can be charged from solar panels, AC mains or DC from my car cig socket (DCC version only);
- It is designed for exactly what I like doing;
- It is easy to stack and stow with rugged handles;
- It can run a small compressor fridge for 24hrs without charging*.

LBS-1250-FPP-DCC includes DC charger
LBS-1250-FPP-STD no DC charger

*based on average consumption of 1.5A / hr for a 40-50L sized fridge

This is what we call **POWERING FREEDOM™**
